

Agenda for 2025.02.18

- Recap
- Talk about the purpose of this committee
 - there might be misunderstandings here
- Share results on the quick poll last week
 - Just general things and how things will be handled
- Open to any one who wants to present/talk about related things
 - but this will be more of a 10 mins (leave him alone to speak, no interruptions pls) and then a couple of specific questions/clarification (5mins)
 - Just want to make sure every one gets an equal say on things
 - email/let me know before the meeting
- Dylan Lang - "short term trailer plan, and give some background information on emergency communications/management"
- Summary of the meeting and what we do next

Why I made this committee

- Committee's was a general way of getting non officers to get involved/help with getting involved with how we as a club do things. (historically a non officer couldn't do anything)
 - SCR Committee was a great example of that. Matt made it and he did things as a non officer
- "Emcomm planning committee" - folks had comments about the name and what it was for

EMCOMM planning committee

Main Purpose: As things stand we have the capability to redo some of the EMMCOMM infrastructure of the club for the next few years

As of now I have the following folks interested

KE8TJE, KE8WZW, KC3VOP, **N3AMK**, KC3YLF, KA3WVU, KQ4LDS,

- Next steps here is to select a chair for this committee.
- Mr. President has to do that

Sign up

- In my initial email it was summarized as **"Over the next few months I want us to come up with short and long term plans for the club as far as EMCOMM is concerned."**
- Short term > How do we spend the ~\$2800 we have now
- Long term > Beyond me/us keep a general plan of what we were building up to. Not throw the next guy under the bus
- This is basically my way of saying hey guys I don't want to be solely blamed if I mess up
- Some examples in the recent past
 - Got VHF kits and had a UHF repeater in the trailer
 - bought a DR2X without VHF cans / not having a real use for it
 - Buy a trailer and wrap it with +\$1000 worth of wraps just because

Dylan -KC3VOP

Polls - General input

- We had a bunch of ideas over the past week
- Some questions
 - i. Generator or No Generator ?
 - ii. Trailer or No trailer ?
- These types of yes no questions once we have heard from both sides only way is to put it to a vote
- Once we have voted we just get behind it and work towards making that happen

Main power system

6 responses

 [Copy chart](#)

-  Generator (~2000 W)
-  Battery based system (modular 48v cells)
-  I don't think we need a "main power system". Having reliable and long enough lasting batteries in each go-kit should be quite sufficient.
-  Both? I don't think that getting the generators or batteries would remove the option of getting the other option if...

Do we go for a trailer ?

6 responses

 [Copy chart](#)

- A hard No
- Yes
- If it doesn't eat into the budget much (<\$500)

What is a suitable operation time requirement for our VHF EMCOMM kits.
(Battery upgrade for the kits)
